

## Amendments to the Claims

Claim 1 (Currently Amended) A data transmission system ~~in which data communications is performed between~~ comprising:

~~\_\_\_\_\_ a first data terminal-equipment placed~~ device on a bonus awarding ~~side, and side;~~

~~\_\_\_\_\_ a second data terminal-equipment used by~~ device for a user who is entitled to receive ~~the a bonus, bonus;~~ and

~~\_\_\_\_\_ a server, wherein~~

said first data terminal ~~equipment comprising~~ device comprises:

a first bonus identifier storage for storing, as an internal bonus identifier, a bonus identifier provided to uniquely identify the bonus awarded to said second data terminal ~~equipment~~ device,

said second data terminal ~~equipment comprising~~ device comprises:

a bonus-attached file requesting part for requesting a bonus-attached file which is for the bonus, ~~and the bonus-attached file~~ including a bonus identifier which uniquely identifies the bonus; and

a second bonus identifier storage for storing, as an external bonus identifier, the bonus identifier included in the bonus-attached file requested by said bonus-attached file requesting part, ~~and~~

said first data terminal ~~equipment~~ device further ~~comprising~~ comprises:

a bonus identifier requesting part for requesting, through data ~~communications~~ communication with said second data terminal ~~equipment~~ device, the external bonus identifier stored in said second bonus identifier storage;

a determination part for determining whether or not the external bonus identifier requested by said bonus-identifier requesting part is the same as the internal bonus identifier stored in said first bonus identifier storage; and

a bonus awarding part for providing, when said determination part determines that the external bonus identifier ~~as being~~ is the same as the internal bonus identifier, said second data terminal ~~equipment~~ device with the bonus specified by the internal bonus ~~identifier~~ identifier, and

said server is operable to perform data communication between said first and second data terminal devices for a user of said first data terminal device to initiate and configure the bonus-attached file based on input data.

Claim 2 **(Currently Amended)** The data transmission system according to claim 1, ~~further comprising a server for performing data communications at least with said second data terminal equipment, wherein~~

said server comprises:

a bonus-attached file storage for storing ~~said~~ the bonus-attached file therein; and

a bonus-attached file transmitter for reading the bonus-attached file requested by said bonus-attached file requesting part from said bonus-attached file storage, and transmitting the bonus-attached file to said second data terminal ~~equipment~~ device, ~~and wherein~~

said second bonus identifier storage stores, as the external bonus identifier, the bonus identifier included in the bonus-attached file transmitted from said bonus-attached file transmitter.

Claim 3 **(Currently Amended)** The data transmission system according to claim 1, wherein

said server further comprises a form data storage for storing form data by which an item ~~needed~~ for creating ~~said~~ the bonus-attached file can be inputted,

said first data terminal ~~equipment~~ device further comprises a form data requesting part for requesting, through data ~~communications~~ communication with said server, the form data in said form data storage,

said server further comprises a form data transmitter for reading the form data from said form data storage responding to a request from said form data requesting part, and transmitting the form data to said first data terminal ~~equipment~~ device, ~~and~~

said first data terminal ~~equipment~~ device further comprises:

an item data creation part for creating item data including the item inputted based on the form data transmitted from said form data transmitter; and

an item data transmitter for transmitting the item data created by said item data creation part to said server, ~~wherein~~ and

said server creates the bonus-attached file based on the item data transmitted from said item data transmitter.

Claim 4 (**Currently Amended**) The data transmission system according to claim 3, wherein

~~said~~the form data is previously created to allow, at least, the bonus and the bonus identifier to be inputted on ~~said a first data terminal-equipment device~~ device side,

said item data creation part creates the item data based on the bonus and the bonus identifier inputted ~~by~~ on the bonus awarding side, and

said first bonus identifier storage stores, as the internal bonus identifier, the bonus identifier inputted ~~by said~~ on the bonus awarding side.

Claim 5 (**Currently Amended**) The data transmission system according to claim 1, wherein

said first data ~~terminal-equipment device~~ device stores ~~said the~~ the bonus-attached file, and transmits the bonus-attached file requested by said bonus-attached file requesting part to said second data ~~terminal-equipment device~~, and

said second bonus identifier storage stores, as the external bonus identifier, the bonus identifier included in the bonus-attached file transmitted from said bonus-attached file transmitter.

Claim 6 (**Currently Amended**) The data transmission system according to claim 1, ~~wherein further comprising a server for performing data communications with said first and said second data terminal-equipment,~~

said first data ~~terminal-equipment device~~ device further comprises a bonus-attached file upload part for uploading, to said server, the bonus-attached file created ~~by said~~ on the bonus awarding side,

said server comprises:

a bonus-attached file storage for storing the bonus-attached file uploaded by said bonus-attached file upload part; and

a bonus-attached file transmitter for reading the bonus-attached file requested by said bonus-attached file requesting part from said bonus-attached file storage, and transmitting the bonus-attached file to said second data terminal-equipment device, wherein and

said second bonus identifier storage stores, as the external bonus identifier, the bonus identifier included in the bonus-attached file transmitted from said bonus-attached file transmitter.

Claim 7 (**Currently Amended**) The data transmission system according to claim 1, further comprising a center station for charging, through data-communications communication with said first data terminal-equipment device, said the user of said second data terminal device if he or she the user of said second data terminal device receives a paid service or make makes a purchase on the bonus awarding side.

Claim 8 (**Currently Amended**) The data transmission system according to claim 1, wherein

said the bonus-attached file further includes a representative position of the bonus awarding side, and

said second data terminal-equipment device further comprises:

a route search part for searching for an optimum route from a starting point designated by said the user of said second data terminal device to said the bonus awarding side based on the representative position included in the bonus-attached file requested by said bonus-attached file requesting part; and

a guidance part for guiding said the user of said second data terminal device to said the bonus awarding side in accordance with the optimum route found by said route search part.

Claim 9 (**Currently Amended**) A data transmission method ~~in which~~ for performing data-communications is performed communication between a first data terminal-equipment placed device on a bonus awarding side, ~~and a second data terminal-equipment used by device~~ for a user who is entitled to receive the a bonus, and a server for performing data communication with the first and second data terminal devices.

the data transmission method~~said first data terminal equipment comprising:~~

~~a first bonus identifier storage step of storing in the first data terminal device, as an internal bonus identifier, a bonus identifier provided to uniquely identify the bonus awarded to said~~ the second data terminal equipment, device;

~~said second data terminal equipment comprising:~~

~~\_\_\_\_\_ a bonus attached file requesting step of requesting by the second data terminal device~~ a bonus-attached file which is for the bonus, and the bonus-attached file including a bonus identifier which uniquely identifies the bonus; and

~~a second bonus identifier storage step of storing in the second data terminal device, as an external bonus identifier, the bonus identifier included in the bonus-attached file requested in said requesting by the second data terminal device of the bonus-attached file requesting step, and operation;~~

~~said first data terminal equipment further comprising:~~

~~\_\_\_\_\_ a bonus identifier requesting step of requesting by the first data terminal device, through data communications communication with said the second data terminal equipment device, the external bonus identifier stored in said second storing in the second data terminal device of the bonus identifier storage step operation;~~

~~a determination step of determining by the first data terminal device whether or not the external bonus identifier requested in said requesting by the first data terminal device of the external bonus identifier requesting step operation is the same as the internal bonus identifier stored in said first storing in the first data terminal device of the bonus identifier storage step operation; and~~

~~a bonus awarding step of providing, when said determining by the first data terminal device operation determination step determines that the external bonus identifier as being is the same as the internal bonus identifier, said the second data terminal equipment device with the bonus specified by the internal bonus identifier identifier; and~~

~~\_\_\_\_\_ initiating and configuring the bonus-attached file based on input data from a user of the first data terminal device via the server.~~

Claim 10 (**Currently Amended**) A computer program stored on a computer-readable storage medium for use with a computer for data transmission in which data-communications communication is performed between a first data terminal-equipment-placed device on a bonus awarding side, and a second data terminal-equipment-used-by device for a user who is entitled to receive the a bonus, and a server for performing data communication between the first and second data terminal devices, the

—said computer program comprising:

a first bonus identifier storage-step operation of storing, by-said the first data terminal-equipment device, a bonus identifier provided to uniquely identify the bonus awarded to said the second data terminal-equipment device, as an internal bonus identifier;

a bonus-attached file requesting-step operation of requesting, by-said the second data terminal-equipment device, a bonus-attached file which is for the bonus, and including a bonus identifier which uniquely-identify identifies the bonus;

a second bonus identifier storage-step operation of storing, by-said the second data terminal-equipment device, the bonus identifier included in the bonus-attached file requested in said bonus-attached file requesting-step operation as an external bonus identifier;

a bonus identifier requesting-step operation of requesting, by-said the first data terminal-equipment device, through data communications with-said the second data terminal equipment device, the external bonus identifier stored in said second bonus identifier storage-step operation;

a determination-step operation of determining, by-said the first data terminal equipment device, whether or not the external bonus identifier requested in said bonus-identifier requesting-step operation is the same as the internal bonus identifier stored in said first bonus identifier storage-step operation; and

a bonus awarding-step operation of providing, by-said the first data terminal equipment device, when said determination-step operation determines that the external bonus identifier-as-being is the same as the internal bonus identifier, -said the second data terminal equipment device with the bonus specified by the internal bonus-identifier identifier; and

an initiating and configuring operation of initiating and configuring the bonus-attached file based on input data from a user of the first data terminal device via the server.

Claim 11 (Cancelled)

Claim 12 (Currently Amended) ~~A data terminal equipment connected device for connecting with an external data terminal equipment placed device on a bonus awarding side for communications communication therewith and a server for performing data communication with the external data terminal device and the data terminal device, and used by for a user who is entitled to receive the a bonus, wherein~~

~~said the external data terminal equipment device stores, as an external bonus identifier, a bonus identifier provided to uniquely identify the bonus awarded to said data terminal equipment device,~~

~~said data terminal equipment comprises device comprising:~~

~~a bonus-attached file requesting part for requesting a bonus-attached file which is for the bonus, and the bonus-attached file including a bonus identifier which uniquely identifies the bonus; and~~

~~a bonus identifier storage for storing, as an internal bonus identifier, the bonus identifier included in the bonus-attached file requested by said bonus-attached file requesting part, and~~

~~said the external data terminal equipment device~~

~~initiates and configures the bonus-attached file based on input data from a user of the external data terminal device via the server,~~

~~requests, through data communications communication with said second data terminal equipment device, the internal bonus identifier stored in said second bonus identifier storage,~~

~~determines whether or not the internal bonus identifier requested by said bonus identifier requesting part is the same as the external bonus identifier stored in itself, and~~

~~provides, when the internal bonus identifier is determined as being to be the same as the external bonus identifier, said data terminal equipment device with the bonus specified by the internal bonus identifier.~~

Claim 13 (**Currently Amended**) ~~A data terminal equipment connected device for connecting with an external data terminal equipment used by device for a user who is entitled to receive the a bonus for data communications communication therewith and a server for performing data communication with the data terminal device and the external data terminal device, the data terminal device comprising:~~

a bonus identifier storage for storing, as an internal bonus identifier, a bonus identifier provided to uniquely identify the bonus awarded to ~~said the external data terminal equipment device~~, wherein

~~said the external data terminal equipment device~~

requests ~~for~~ a bonus-attached file which is for the bonus, ~~and the bonus-attached file~~ including a bonus identifier which uniquely identifies the bonus, and

stores, as an external bonus identifier, the bonus identifier included in the requested bonus-attached file, and

said data terminal ~~equipment device~~ further comprises:

a bonus identifier requesting part for requesting the external bonus identifier stored in ~~said the external bonus data terminal device identifier storage~~;

a determination part for determining whether or not the external bonus identifier requested by said bonus-identifier requesting part is the same as the internal bonus identifier stored in said first bonus identifier storage; ~~and~~

a bonus awarding part for providing, when said determination part determines that the external bonus identifier ~~as being~~ is the same as the internal bonus identifier, ~~said the external data terminal equipment device~~ with the bonus specified by the internal bonus ~~identifier~~ identifier; and

an initiation and configuration part for initiating and configuring the bonus-attached file based on input data from a user of said data terminal device via the server.
